Professional Summary

DevOps Engineer with 5 years of experience in designing and operating CI/CD pipelines, containerized build platforms, and automated OS image delivery systems. Strong hands-on expertise in **Jenkins**, **Docker**, **Kubernetes**, and Infrastructure as Code using **Terraform**. Experienced in **multi-cloud environments (AWS and Azure)**, supporting scalable CI workloads, artifact promotion, and immutable build practices. Proven ability to automate complex workflows and improve build reliability and speed.

Core Skills

- **CI/CD & Version Control:** Jenkins, Git/GitHub, Makefile, SonarQube, ArgoCD
- **Containers & Orchestration:** Docker, Kubernetes, Helm
- **Cloud Platforms:** AWS (EC2, S3, IAM, RDS, Lambda, CloudWatch), Azure, VMware vCenter (Multi-Cloud Experience)
- **Infrastructure Automation:** Terraform, Ansible, Packer
- **Scripting & Programming:** Shell, Python, Golang, PowerShell
- **Monitoring & Logging:** AWS CloudWatch, Prometheus, ELK
- **Other Tools:** JIRA, Postman

Professional Experience

HCL Technologies Ltd – DevOps Engineer (2021 – Present)

- Designed and implemented **end-to-end CI/CD pipelines in Jenkins** (multibranch & freestyle) for Golang, C, and containerized apps, increasing release frequency and reliability.
- Automated provisioning and configuration with **Ansible**, reducing manual setup effort by **70%** across Linux/Windows environments.
- Integrated **Docker containers & Kubernetes** into build pipelines, ensuring consistency and enabling scalable deployments.
- Worked in a **multi-cloud DevOps environment**, primarily on AWS and Azure, supporting CI/CD workloads, artifact storage, and infrastructure automation using Terraform.
- Managed and supported CI infrastructure on **AWS (EC2, S3, IAM, CloudWatch)** and **Azure (VMs, Storage Accounts, Networking)** with infrastructure defined using **Terraform**.
- Customized **Cisco ISO, QCOW2, and OVA images** using **Packer + Ansible**, publishing artifacts to JFrog for enterprise-wide usage.
- Ensured code quality by integrating **SonarQube** into pipelines, reducing bugs and vulnerabilities at early stages.
- Monitored and optimized performance with **AWS CloudWatch, CRON jobs**, and custom scripts.
- Collaborated in Agile teams, improving delivery timelines by **20%** through automation and streamlined workflows.

Key Projects

Software Trustworthy systems– Client: Cisco

Tools: Jenkins, Docker, Ansible, Packer, AWS, Terraform, Kubernetes, SonarQube

- Engineered **secure and reproducible Linux system images** (ISO, QCOW2, OVA) by extending official Ubuntu and AlmaLinux base images with enterprise RPMs, DEBs, keys, and security packages.
- Implemented **Dockerized build environments** and Jenkins pipelines to standardize package

compilation and ISO generation, reducing packaging cycle time by 35%.

- Leveraged **Packer and Ansible** to automate VM-based image validation, configuration hardening, and artifact generation.
- Executed pipelines on **Kubernetes-based Jenkins build agents**, enabling scalable parallel execution for multiple teams.
- Deployed and validated images on **AWS** infrastructure for testing and quality assurance.
- Published Docker images and OS artifacts to JFrog Artifactory, enabling secure and versioned artifact promotion across environments.
- Delivered consistent, immutable enterprise images with a **35% reduction in overall build time**.

Intel Quick Assist Technology – Client: Intel

Tools: Jenkins, Docker, Golang, Azure, Bash, PowerShell, JIRA, Postman

- Built and deployed **Intel QAT software packages** for Linux (C + Go environment) and Windows (Standard & Hyper-V modes).
- Developed and maintained **Jenkins CI/CD pipelines** for accelerated build, test, and deployment.
- Optimized repetitive workflows with **Bash & PowerShell scripts**, reducing manual effort significantly.
- Managed virtual machine provisioning and testing environments using **Azure**, enabling scalable and repeatable build/test cycles.
- Programmed RESTful APIs in **Golang** and validated them with Postman, enhancing testing efficiency.
- Achieved **40% improved deployment reliability** through CI/CD automation and container adoption.

GenAI Webex Chatbot – Value Add Project

Tools: Python (Flask), OpenAI API, Webex SDK, LLMs, Prompt Engineering, Jenkins, VMware vCenter

- Engineered a **Webex chatbot powered by Large Language Models (LLMs)** to handle customer queries with intelligent, context-aware responses.
- Applied **prompt engineering techniques** to optimize query understanding and improve response accuracy.
- Built a **Flask backend** integrated with Webex APIs for seamless real-time communication.
- Implemented **Jenkins CI/CD pipelines** for streamlined build, testing, and deployment in VMware vCenter.
- Maximized customer support efficiency by **40%**, reducing manual query resolution and enabling faster response times.

Achievements

- **ERS Knowledge Champion Award** for innovative DevOps solutions.
- Reduced deployment time from **hours to minutes** via CI/CD automation.
- Spearheaded **container adoption** across projects, enabling consistent environment replication.

Education

B.Tech – Swarnandhra College of Engineering and Technology (2017 – 2021)

CGPA: 8.98
