ACADEMIC PROFILE

Kongu Engineering College

2019 BE (Mechanical)

SOFTWARE SKILLS

Public Cloud	:Amazon web Service
Operating System	:Linux(Ubuntu, Cent OS, Amazon Linux)windows server
Configuration Management Tools	:Ansible, Terraform, Cloud formation, AWS CDK
Containerization	: Docker, Kubernetes
CI/CD	: Jenkins
Source code Management	: Git
Build tool	: Maven
Deployment tool/server	: Apache, Tomcat
Monitoring Tools	: Prometheus, Grafana
Database	: MySQL, SQL Server

CAREER OBJECTIVE

I am a seasoned **Multi-Cloud DevOps Engineer** with over **3.7 years** of experience in the IT industry, including **3.5 years** of hands-on work with **AWS** and **Azure**. My expertise lies in DevOps, designing, implementing, and optimizing CI/CD pipelines, automating infrastructure, and promoting seamless collaboration between development and operations teams. I am now seeking a challenging role where I can leverage my skills to drive the adoption of modern DevOps technologies and best practices.

PROFESSIONAL SUMMARY

As a **Cloud DevOps Engineer** with over **3.5 years** of hands-on experience, I have supported, automated, and optimized mission-critical AWS and Azure installations by utilizing **CI/CD**, and configuration management procedures. I have also implemented cloud strategy in a variety of contexts.

- Worked on Jenkins by installing, configuring, and maintaining for continuous integration (**CI**) and end-to-end **automation** for all builds and deployments.
- Managed **GitHub** repositories and permissions, including **branching and tagging**.
- Designing, implementing, and administering **Kubernetes** Container systems, as well as **Docker Containers**.
- Excellent skills in applying Continuous Integration and Continuous Deployment and Continuous Delivery processes & tools [Example: **Git, Terraform, Jenkins, Apache Tomcat, Shell scripting, Java, Docker**, etc.].
- Provided timely technical support and troubleshooting assistance to end-users, resolving issues related to software installation, network connectivity, and system performance.
- Managed and maintained **Linux**-based infrastructure and basic Windows level comprising multiple servers, ensuring high availability and optimal performance.
- Developed and maintained backup and disaster recovery strategies, including regular data backups, offsite storage, and recovery procedures, ensuring data integrity and business continuity in the event of system failures.
- Having good experience in Amazon Web Services environment and good knowledge of AWS services like **Elastic Compute Cloud (EC2), Elastic Load Balancers, IAM, S3, ECS, Cloud Front, RDS, VPC, Route53, Cloud watch, Cloud Formation**.

NoSQL	: DynamoDB (AWS)
Public Cloud Service	: AWS, Azure, GCP
Atlassian tools	: JIRA
Repository Tools	: Nexus artifactory, Docker Hub, GitHub, ECR
Code quality tool	: SonarQube, K6
Scripting	: Bash, Python, Typescript, Java
Security Tools	: IAM, ACM

CERTIFICATION

AWS Certified Cloud Practitioner
(CLF-C02)

- Mainly Concentrated on: **EC2 (ELB, AUTO SCALING, EBS), VPC, Lambda, API Gateway** actively manages, improve, and monitor cloud infrastructure on AWS, **EC2 including backups, patches, and scaling.**

- Created AMI images of critical EC2 instances as backup using **AWS CLI and GUI**. Utilize EBS to store persistent data and mitigate failure by using snapshots.

- Implementation of **NAT gateways** for web apps hosted in private subnets also setup and configured EIP to EC2 instances.

- Developed shell scripts (**Bash**) or utilized configuration management tools like **Ansible** to automate routine tasks, streamline system administration processes,

- Created a **CICD** flow using **Azure DevOps** services such as **Azure repos, Azure pipeline, Azure boards, Azure test plan, Azure artifact.**

- Skilled in implementing and managing cloud infrastructure on **Microsoft Azure**, including virtual networks, compute resources, and DevOps workflows, to support scalable and secure application deployments

WORK EXPERIENCE

- Company: **TCS**
- Location: Bangalore, India.
- Duration: From March 2022 to till date

PROJECTS

Client : Vontier

Roles and Responsibilities

- Setting up **Jenkins** multi-branch pipelines to automate the **CI/CD** process across multiple branches, ensuring consistent and reliable deployment workflows for development, staging, and production environments.
- Proficiently managed source code repositories with **Git**, streamlining version control and facilitating effective collaboration among geographically distributed development teams.
- Integrated Docker containers with monitoring tools like **Prometheus** and **Grafana** stack to track container health, logs, and resource utilization.
- Designed and implemented cloud infrastructure using **Terraform** for automated and scalable deployments across multiple environments.
- Implemented security scanning for **Docker** images using tools like **Docker Bench** for Security and Clair to identify vulnerabilities and ensure compliance.
- Deployed and managed containerized applications on **Kubernetes**, automating workload scaling, monitoring, and self-healing to ensure high availability and performance.
- Configured **Docker** networks, managing container-to-container communication and ensuring secure isolation of services within Docker containers.

- Utilized **Jenkins** to automate various CI/CD tasks, streamlining build, test, and deployment processes
- Experience in **Kubernetes Cluster** Setup and deploying applications in Kubernetes cluster.
- Implemented **S3** lifecycle policies to automate the transition of data between storage classes and expiration of objects, optimizing storage costs.
- Designed **VPC** architectures with redundancy across multiple availability zones, ensuring high availability and failover capabilities for critical applications.
- Managed and rotated **IAM** access keys regularly, following best practices for key management and reducing the risk of compromised credentials.
- Configured Lambda function triggers for event sources such as S3 bucket uploads, **DynamoDB** stream changes, and SQS message arrivals, enabling real-time data processing and automation.
- Designed and implemented serverless architectures using **AWS Lambda** to run code in response to events without provisioning or managing servers, reducing operational overhead and costs.

Client : Gilbarco

Roles and Responsibilities

- Maintain GIT Repositories, Handling Releases and Branching activities for **GitHub**.
- Managed multiple builds from the development team by creating **Jenkins** build jobs and executing deployment activities across various environments
- **Automate** the build Process Using Jenkins jobs & the tech stack was **Java** based application
- Configuring Jenkins job with related plugins for **Testing, Artifactory**, and Continuous Deployment to accomplish the complete CI / CD.
- Using **AWS API Gateway and Lambda**, unique **API** endpoints were implemented for specialized functionalities like processing a particular HTTP requests or interacting with other external systems
- Used **ECS** to access **AWS Fargate** to run and scale the containerized workloads.
- Consistently check the **API Gateway** setup for security flaws.
- Maintained and tracked **Release files** for each software release to ensure version control and deployment accuracy
- Performing deployments to multiple environments
- Understanding the client environment, Administrating and creating solutions using **AWS services, CI/CD, GIT, Dockers**
- Taking periodic backups of **Jenkins job**, restoring in case of there is any issue with Jenkins server
- Writing the **playbooks** using **Ansible** for provisioning servers
- Manage and configure AWS services as per the business needs (**ELB, Lambda, ECS, Route53, S3, Cloud Watch, IAM, VPC**) in Global infrastructure.
- Managing L1 and L2 level problems, participating in client calls, carrying out numerous deployments, and addressing tickets to guarantee system availability in accordance with various Service Level Agreements (SLA).
- Worked on building the **Kubernetes cluster** from the ground up.
- Used **Python & Typescript** for the **AWS CDK** to define AWS resources and their configurations
- Taking the backup of **S3** and attaching the **EBS** to instance.
- Created physical infrastructure by using **VPC** service.
- Worked on **Service now** ticketing tool.
- Attaching or Detaching **EBS** volume to **AWS EC2** instance.
- Designing, building and managing **Kubernetes Container** platforms, **Docker Containers**.
- Hands-on experience working with web servers (**Apache**) and application servers (**Tomcat, JBoss**).

Client : Fidelity

Roles and Responsibilities

- Hands-On experience in establishing cloud infrastructure using **Microsoft Azure**.
- Managed data storage solutions using **Azure Blob Storage**, optimizing data access and security.
- Configured **Azure Virtual Network (VNet)** to enable secure and seamless communication between Azure services and on-premises resources.
- Deployed and managed **Azure SQL Databases**, ensuring high availability, performance tuning, and backup strategies.
- Developed server less applications using **Azure Functions**, reducing operational overhead and improving scalability.
- Implemented cloud services **IaaS, PaaS and SaaS**.
- Good Experience in Operating systems like **Windows, Ubuntu & Linux (Red Hat)** commands.
- Expertise with version control systems like Git, as well as managing source code through **GitHub** repositories.
- Experience managing with **CI/CD** architecture implementation using **Jenkins**.
- Collaborated with development teams to create CI/CD pipelines using **Azure DevOps**, improving deployment frequency and reliability.
- Responsible for managing performance issues for applications deployed in the **Azure environment**.
- Written **Terraform** code for building Cloud Infrastructure. Automated builds workflow using terraform
- Utilized VI editor to write, modify, and optimize **YAML** scripts for infrastructure as code, CI/CD pipelines, and **Kubernetes** deployments on **Azure**, ensuring efficient automation and integration.
- Knowledge on Application Monitoring Tools like **Prometheus** and Log Monitoring Tools like **Splunk**.
- Automatically triggered Jenkins build when changes are pushed to GIT using **Webhook** method.
- Utilized Azure Monitor for comprehensive monitoring, alerting, and logging of all Azure resources, enabling proactive issue resolution.
- Finest Experience in deploying Kubernetes k8's Cluster and managing using **Kops**.
