

SRINITHIN M

Cloud DevOps Engineer

+91 9095430070 | srinithinm24@gmail.com | github.com/smplynithin

PROFESSIONAL SUMMARY

Cloud DevOps Engineer with **3.5+** years of experience building automated, scalable, and secure **AWS** infrastructure. Proficient in CI/CD, container orchestration (**Docker, Kubernetes**), infrastructure-as-code (**Terraform**), and DevSecOps practices including **IAM** governance and encryption. Skilled in managing microservices architectures, automating deployment workflows, and improving system reliability through proactive monitoring and alerting. Proven track record of accelerating deployments, optimizing cloud resources, and ensuring high availability in production environments.

CORE SKILLS

Cloud Platforms

Amazon Web Services (AWS)

Infrastructure as Code / Configuration Mgmt

Terraform, Ansible, Packer

CI/CD & GitOps

Jenkins, Github Actions, ArgoCD, Makefile

Build Tools

Maven

Artifact & Container Repositories

Nexus Repository, Docker Hub, Amazon ECR

Monitoring & Logging

Prometheus, Grafana, AWS CloudWatch, ELK Stack

Scripting & Programming

Bash, Python, Shell, JSON, PowerShell, YAML

Operating Systems

Linux (Ubuntu, CentOS, Amazon Linux), Windows Server

Containerization & Orchestration

Docker, Kubernetes, AWS EKS, Helm

Source Code Management / Version Control

Git, GitHub, GitLab

Code Quality & Security

SonarQube, Trivy, Gitleaks, IAM

Web / Application Servers

Apache, Tomcat, Nginx, Postman

Databases

MySQL, SQL Server, DynamoDB (NoSQL)

Collaboration and AI Tools

JIRA, Slack, Github Copilot

PROFESSIONAL EXPERIENCE

DevOps Engineer, HCL Technologies

Dec 2024 – Present

Project: 4G Microservices Cloud Enablement Platform

Technologies: AWS, EKS, Kubernetes, ArgoCD, Helm, Terraform, Ansible, Jenkins, Prometheus, Grafana

- Designed and deployed multi-zone AWS cloud infrastructure supporting 4G microservices; migrated critical applications to containerized environments using Docker and Kubernetes (EKS).
- Automated infrastructure provisioning and application deployment using Terraform and Ansible, standardizing environment setup across the platform and cutting manual configuration effort.
- Built and maintained complex CI/CD pipelines in Jenkins integrating Git, GitHub, Gitleaks, SonarQube, and Amazon ECR, enforcing automated DevSecOps compliance gates and static code analysis, **reducing deployment time by 40%**.

- Supported Kubernetes deployments across 76+ worker nodes, configuring services, pods, load balancers, Helm charts, ConfigMaps/Secrets, HPA, and RBAC for containerized workloads.
- Implemented GitOps-based continuous delivery workflows with ArgoCD, improving deployment consistency and release traceability.
- Configured Prometheus and Grafana with custom metrics for real-time monitoring and alerting; applied SRE practices to incident and problem management, sustaining **99.99% uptime** for critical production systems.
- Managed IAM roles, access policies, and encryption standards as part of cloud security hardening; contributed to cost optimization initiatives by right-sizing EKS node groups, **improving resource utilization by 25%** after migrating workloads to AWS EKS.
- Built a reusable DevOps framework adopted across project teams to standardize deployment practices within an Agile/Scrum delivery model, reducing onboarding time for new services.
- Authored technical documentation for infrastructure design, deployment procedures, and knowledge transfer (KT), supporting operational continuity.

DevOps Engineer, Xitadel CAE Technologies

Dec 2021 – Dec 2024

Project: Cloud Infrastructure Provisioning & CI/CD Platform

Technologies: AWS, EKS, Terraform, Ansible, Jenkins, SonarQube, Nexus Repository, Docker, CloudWatch, Prometheus, Grafana

- Managed end-to-end AWS DevOps operations — CI/CD, infrastructure automation, containerization, configuration management, and monitoring.
- Engineered Jenkins CI/CD pipelines integrating GitHub, SonarQube, Docker, and Nexus Repository to standardize release delivery and enforce DevSecOps best practices, **reducing manual deployment effort by 30%**.
- Architected core AWS infrastructure (VPC, EC2, ALB, RDS, S3) using reusable Terraform modules and workspaces for scalable, repeatable provisioning, **cutting infrastructure provisioning time by 40%**.
- Optimized Docker images through multi-stage builds to improve CI build performance and reduce image footprint.
- Automated EC2 patching, configuration management, and Linux administration (user/package management, service troubleshooting) using Ansible, **reducing server administration effort by 35%**.
- Designed secure AWS networking and IAM architecture (public/private subnets, NAT/Internet gateways, route tables, VPC peering, encryption) and implemented CloudWatch, Prometheus, and Grafana dashboards/alerting for proactive monitoring.
- Supported production AWS EKS deployments within an Agile/Scrum team — managing Kubernetes manifests and Helm charts, validating pod/node health, and resolving release issues to sustain high availability.

EDUCATION

B.E., Automobile Engineering — Kongu Engineering College
CGPA: 8.04

2016 – 2020

CERTIFICATIONS

- AWS Certified Solutions Architect – Associate (SAA-C03)
- AWS Certified Cloud Practitioner (CLF-C02)
